

## 7618 PC DEPOT Corporation

### Business Growth Led by Solution Services Mainly for Premium Members

June 9, 2016

First section of Tokyo Stock Exchange (TSE)

#### Key Points

- Sales from solution services focusing on premium membership services have been expanding smoothly and will exceed 50% of total sales. Thanks to the effects from implementing a stock-type business model upon revenue, the Company is enjoying constant strong earnings and will continue to achieve record profits. Ordinary income is expected to rise to 5 billion yen (up 15% year-on-year (YoY)) in the term ending March 2017. The ratio of ordinary income to net sales will reach 9%, and the ROE will remain at the 15% level.
- The Company raised 4 billion yen through equity finance in November 2015. To make better use of the funds the Company has been speeding up the shift in its store format toward Smart Life Partner (SLP) stores, which maintain premium membership services as their mainstay. With the weight of sales shifting from products to services, sales from solution services that integrate hardware and software are on the increase. As the range of services is expanding, the benefit from a raise in service prices can be expected.
- The Company is evolving its store format from specialization in desktop and notebook computers and transforming its business model to a focus on Internet device service stores that combine merchandise and services. With premium services at the core, schemes collecting fixed monthly fees from users purchasing PCs, smartphones, or new IoT products and services have become a major revenue source. In April 2016, the Company released an original brand of low-priced smartphones and launched a premium smart service for smartphones. This will contribute to a further increase in the number of premium members.
- In addition to the renovation of existing stores, more new SLP Stores will be opened. A large new SLP Store was opened in Kinuta, Setagaya in March 2015. In December 2015, the Aoyama Store was opened as the first new SLP Store opening in central Tokyo. In March 2016, the Azabu-Juban Store was opened, and business is expanding smoothly. In June 2016, another SLP Store will be opened in collaboration with Kinokuniya Company Ltd. at Lalaport Toyosu. New developments can be expected with central Tokyo being set as the target area for store openings in the future.
- While keeping PCs as its platform, the Company is offering diverse products to cultivate customer demand for differentiated services that other companies cannot replicate. With the advent of the IoT era, the Company's solution services will further expand. While an ordinary income to sales ratio of 10% and ROE of 15% have been set as targeted key performance indicators (KPI), an ordinary income of 6 billion yen is within reach. The next key factor will be to dramatically increase the number of members. Along with the improved profitability, the financial basis for the development of many SLP stores has been strengthened. Since the new challenge is to start moving toward an ordinary income of 10 billion yen, the stock market will likely assess the Company at a higher value.

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. Analysis by: Yukio Suzuki

(Chief Analyst, Belle Investment Research of Japan)

Definition of Company rating: Qualitative evaluation based on criteria such as 1) management capabilities; 2) abilities to grow/maintain the business; 3) possibilities of downward revisions to earnings forecasts. The Company is expressed as a four-level rating where "A" means good, "B" means some degree of improvement is required, "C" means considerable improvement is required, and "D" means the state of the company is extremely grave.

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

## 1. Characteristics: Transforming into stores specializing in Internet device services

### **A shift to a new format, with a corporate mission of bridging the digital divide**

PC DEPOT is prioritizing support for customers struggling to use digital network devices. To this end, the Company is improving its services in a slow and steady manner. These efforts cultivate a service market, enabling the Company to realize its unique business model.

President Nojima says that the Company will take up challenges but will not take excessive risks. The Company experiments, confirming a new course before carefully expanding business.

The Company has been developing IT solution stores known as Smart Life Partner (SLP) stores that customers can maintain a relationship with over the long term. Instead of merely enjoying the convenience of a neighborhood PC superstore, users can have the Company solve the problems they experience when using IT equipment and networks.

New devices and services are continuously entering the market, which is a characteristic of the information and communication technology market. Customers need support in order to maintain an IT environment that enables them to fully utilize the products and services they use. SLP stores provide services and detailed explanations so that users can make full use of the features of their desktops, notebooks, smartphones, tablets (multi-function mobile terminals), and other devices, and meeting any other user requirements as a total set.

These services are truly convenient. If consumers use products over a long period of time, in addition to the profit generated at the time they make the purchase, it is quite likely they will come to pay fees for services that make using such products more convenient. To make this happen, users must be satisfied with the convenience provided by the service.

The starting point for traditional retailers is merchandise, but as the Company is both a retailer and service provider, its starting point is also services. It will offer Internet-related services, mainly for devices, thereby building relations with its customers.

The Company generates profits in three ways: firstly, selling products; secondly, through technical fees for product repairs; and third, from monthly fees paid by members who receive ongoing support from the Company. Especially, the core of the Company's business is the support fees paid by its members, making it unique in the retail industry.

The Company considers its corporate social responsibility (CSR) to be to reduce the digital divide in society. To a certain extent, a digital divide arises between people who can use information and communication technologies, and those who cannot. It is not good for society as a whole when people who cannot use these technologies find themselves at a disadvantage. The Company intends to contribute to more convenient and enjoyable daily lives for these lives by supporting them in making

The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

the most of IT services. This support service is being provided by PC DEPOT, with its stores acting as a base for such services.

### **Business starts with personal computers**

President Nojima (age 56) used to work at Nojima, a consumer product mass retailer (Code No. 7419, listed on JASDAQ). The eldest son of Nojima Co.'s founder is currently president of that company, while Takahisa Nojima, his brother, is president of PC DEPOT. He was in charge of supervising stores and merchandise at Nojima Co., but once personal computers began to become popular, he decided to set out on his own and established an independent business. While Nojima is still one of the shareholders of Nojima Co., there is no business relationship between that company and PC DEPOT.

Nojima was 34 years old when he started his business, which is now in its 23rd year. In the early days after the founding of his business, consumers wanted to buy PCs, but the devices were still beyond their budgets. Many people wanted to own their own desktop or notebook computer, but such hardware was still beyond their reach. In those days, only a limited number of people went all the way to Akihabara, a Tokyo district famous for consumer electronics and Japanese sub-culture, to buy personal computers. In contrast, Nojima went into business selling PCs in the same way that retailers in general deal with new merchandise. The Company performance steadily improved, and in 1999, five years after its establishment, it became listed on JASDAQ. Subsequently, the Company was promoted to the first section of the TSE in November 2015.

As the Internet era emerged in 2000, the Company entered into a new phase. At the time it was listed, it operated about a dozen stores with net sales of 15 billion yen, ordinary income of 800 million yen, and no debt.

At present, desktops, notebooks and related products are commonly sold at consumer electronics superstores. Also, there is a wide variety of specialist computer superstores. When viewed in the broad sense of the consumer electronics and computer superstore sectors, the Company ranks in a low position in terms of size, but it is competing on a different playing field to its rivals. It is not directly competing with the biggest companies, such as Yamada Denki, Edion, and K's Denki. It should be noted that the Company seeks to emphasize its uniqueness.

### **Converting franchises to directly-managed stores: Cooperation with K's Denki**

The number of subsidiaries of PC DEPOT PC Clinic has increased by five as the Company purchased PC Clinic stores from Hokuetsu K's Co., Ltd.

When developing its PC DEPOT stores, which are comprehensive specialist computer retailers, the

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

Company allowed K's Denki stores, which are operated by K's Holdings Co. (Code No. 8282), to become PC DEPOT franchisees. K's Denki was the second PC DEPOT franchisee. It was beneficial for both companies, in that a consumer electronics superstore began to deal with PCs.

The Company does business in cooperation with K's Denki because, according to Takahisa Nojima, management concepts of the two companies are quite similar and he feels much empathy with Shuichi Kato, Chairman and CEO of K's Holdings Co. The Company focuses on basically being a chain store operation that is easy for customers to use, for example, offering self-service sales apart for parts and offering discounts for paying in cash instead of points cards.

From the very start, Mr Max Co. (who run general discount stores) and Kitamura Co. (specializing in cameras) also became PC DEPOT franchisees. However, as major operators became dominant in the consumer product mass retailer format, general discount stores found it difficult to sell PCs. FC stores of Mr Max Co. were bought by the Company and became its subsidiary (the present PC DEPOT Stores) by 2010.

Aside from PC DEPOT franchises, PC DEPOT PC Clinics, which are franchise outlets providing technical services, were established as concessions inside consumer electronics superstores. PC Clinics successfully operated in many of K's Denki stores, and then the franchise was expanded.

As of the end of March 2016, there are 52 directly-managed PC DEPOT stores (including 25 SLP stores), 13 stores outside the Kanto region run by the PC DEPOT Stores Co., Ltd. subsidiary, and 3 franchise stores, for a total of 69 stores. In addition, there are 52 directly-managed PC Clinics, 5 stores run by the PC DEPOT Stores Co., Ltd. subsidiary, and 1 franchise store. As such, the Company currently operates 127 stores.

#### Store development conditions

(Number of stores)

Number of stores (at the end of March 2016)			
PC DEPOT	Directly-managed	28	PCs and related products for home users; technical support services Kanto region (Kanagawa, Tokyo, Chiba, Saitama, Shizuoka, Gunma, Tochigi and Ibaraki)
	(SLP stores included in the above)	25	
	Subsidiaries	13	
	FC	3	
	Subtotal	69	
PC DEPOT PC Clinic	Directly-managed	52	Operations inside the premises of other mass home electronics retailers
	Subsidiaries	5	
	FC	1	
	Subtotal	58	
Total		127	

NOTE: SLP stands for PC Depot Smart Life Partner stores, a new type of store, which receive royalties from franchise chain (FC) stores.

Among the 28 directly-managed PC DEPOT stores, 22 stores are Smart by Solutions (S x S) stores.

Among the 13 stores directly managed by a subsidiary, 9 stores are Smart by Solutions (S x S) stores.

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

PC Clinic was operated mainly by FC stores until seven years ago, but the Company transformed the FC stores to directly-managed stores. The Company and K's Denki agreed that direct management would be more effective for enhancing the service functions of the stores, and so the Company acquired these franchised stores. Currently, the Company operates directly managed PC Clinics inside K's Denki stores.

### **Ongoing Web business**

EJWORKS Co. (ejworks), a PC DEPOT subsidiary, is engaged in the IT solution business and has lines of business that include internet service provision and Web content creation. The Internet services market started from around 2000. However, this market has matured, and a process of natural selection began among Internet service providers. The Company is acquiring small-to-midsize providers and to maintaining their customer-facing services. Customers would experience a seamless transition as they would keep their original email addresses.

Moreover, the Company has recently been utilizing this subsidiary as a support team for its content development and has come to attach more importance to it. The idea is to position it as a new support base for development.

### **The Company has made good effective and flexible use of part-time workers, and it has hired some of them as regular employees.**

At the end of March 2016, in addition to 788 regular employees, 1,414 part-timers (on an 8-hour shift basis) were working for the Company. Seven categories of tasks are assigned, including operations (cashiers and baggers), attending to customers (customer-service personnel), and clinic services (preventative and recovery services); workers are trained to handle the basic tasks involved in one category in one week. They carry walkie-talkies with them in the store in order to help each other by sharing information, which allows them to ensure a high level of customer satisfaction. Many part-time workers have been working for the Company for years, and each year roughly 60 to 70 workers change their status from part time to full time.

### **Complying with corporate governance: Increase in the number of outside directors**

The Company will comply with corporate governance as a company with auditors. There are currently three outside directors (including two independent outside directors), and the Company plans to increase the number of outside directors to four at the next general shareholders meeting. These outside directors are a certified public accountant, an attorney, a university professor, and an entrepreneur. With eight inside directors and four outside directors, discussions at the board of

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

directors will be livelier. Mr. Mineo Fukuda, an outside director candidate, successively filled the post of director at Recruit Holdings Co., Ltd., KADOKAWA CORPORATION, and Jupiter Telecommunications Co., Ltd. He has extensive experience in the media industry. Mr. Yoshinari Noguchi, an auditor candidate, has long experience in internal audits at Oracle Corporation.

Most directors who execute business are in their 40s, showing that management talent has developed. President Nojima established this Company after leaving Nojima Corporation. Regarding the operation of the company, the president is aiming to implement business management suitable to fulfill the need for PC DEPOT, as a public company, to continuously develop in the rapidly-changing IT industry.

## 2. Strength: Profit structure changed into one where services also generate revenue

### **Specializing in PC-related technical services, keeping the leading position in the industry**

The Company is strong in Japan's Kanto region and covers 90% of the population there. Consumers who want to make use of PC DEPOT support services will find there is one within reasonable travelling distance. Consumers who buy a desktop or notebook can have a Wi-Fi router set up for them at the store, and can start using their new computer as soon as they get home simply by plugging it in. This saves them from having to do the initial setup themselves. Smartphones also can connect to these Wi-Fi routers. If customers have a problem, they can call the Company's call center and get immediate attention. Users can obtain all these services just by paying a monthly fee. This service provides users with genuine reassurance and convenience.

The Company leads the industry in PC repairs and maintenance services. Moreover, the revenue generated by these services has been growing in double digits annually and as such is demonstrating rapid growth. Although the Company is a middle-standing company in the industry in terms of the number of PCs sold, it has unique service characteristics.

Over last 10 years, while PC DEPOT gradually shifted its business to services, the Company ran into difficulties in 2011 and 2012 when it opened five large conventional-type stores. The earnings fell around this time, and the balance of interest-bearing debt grew to over 7 billion yen.

The Company has achieved a unique presence among its competition with mass home electronics retailers. It has survived well in local competition as a computer specialist, although it could not compete against major companies in terms of total sales volume. Under these circumstances, the Company did not overextend itself when opening new stores. It decided, however, to become a customer-orientated IT solutions company, by striving to improve its services, instead of increasing

---

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

the sales numbers for desktops, notebooks and other hardware. The Company markedly changed its tack to follow this direction in 2005. This was the second turning point for the Company since it was founded.

Providing solutions in combination with various services is key. The Company provides telecommunication services using SoftBank's network (former Y- MOBILE's) as a Mobile Visual Network Operator (MVNO). Also providing fiber-optic network services as a fixed virtual network operator (FVNO). Moreover, when members subscribe to the Company's premium services, they can get any support they need: maintenance, call-center services, anti-virus support, and a "full installation" service for when customers replace old PCs.

One of the Company's strengths is this lineup of original services it has developed and runs. No other PC shop is capable of delivering technical services, especially data recovery, as speedily as PC DEPOT. The competition simply cannot match the level of service that the Company's provides.

The Company set as a policy objective its transformation into a store that specializes in services, and has strengthened its commitment to this policy as it entered the Internet era. The Company has also emphasized the sale of store brand products under the name "OZZIO." However, although OZZIO accessories and supplies are highly profitable when compared with its other retail lines, the Company is moving further toward providing customers with services.

### Unique business model with premium services as its income source

The services have various aspects, including (1) the continued subscription of premium members, (2) repair and maintenance, (3) MVNO and FVNO, and (4) content and solution services that connect the above-mentioned merchandise horizontally. The categories in the previous sentences are listed in order with respect to the percentage of total sales represented by each such category. In this sense, with premium membership service at the core, solution services have been growing on a full scale.

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

The Company's business model is quite unique, even when compared to companies outside of Japan. The model consists of product sales, service sales, its operation as an MVNO, and other areas. Members enter into a three-year premium service contract. The company bears the cost of support up front, and then recovers it from the fees paid by members.

Customers would like to use the PCs, tablets or other devices they have bought as soon as they get home. Takahisa Nojima remembers what that feels like. If after buying a PC, for example, a user takes 3 hours to do things such as create a recovery disc, set up anti-virus software, configure the initial settings and set a password, and then comes to a dead end, he or she will be stuck without some help. PC DEPOT's premium services are solutions to help such users over the Internet.

Suppose a customer brings his/her old computer and member card to a PC DEPOT store, and buys a new one. The store's service personnel will then carry out all the necessary installations of software for the customer onto his or her new computer. The customer takes the new PC home, and is able to use it immediately in the same way as the old one, via the PC DEPOT-branded wireless router, without having to do anything in particular. This is convenience personified.

A patent for this router's systems was registered in March 2012. Including other services, typical packages for these services are 4,500 yen per month (for up to 7 devices) and 5,000 yen per month (for up to 10 devices). The packages are also cloud-capable. These services have been gradually expanded and improved.

PC DEPOT's business model, which generates revenue from service sales, was brought fully into operation in November 2005 and has been steadily expanded since. Conventionally, various technical services such as installing additional memory have been provided for a price. Today, however, when a fixed month fee is paid, a wireless router is leased to enable the consumers to use high-speed internet service with the purchase of a PC alone. (Depending on the package, there is no extra fee for as many as 3 to 10 devices.)

As mentioned above, PC DEPOT also is an MVNO. An MVNO does not have its own mobile communication network, but provides services under its own brand by renting network space from major carriers. The Company provides services to customers as a telecommunications carrier, rather than acting as an agent for other carriers in exchange for incentives. This makes it possible to provide services that customers may want in a single package, making for a very convenient premium service. This service (an EM premium service new three-year elite personal plan) costs 6,800 yen (7,344 yen including tax) a month.

PC Clinic can readily be used as a one-time-only technical service. Making customers into premium service users is a better strategy in order to retain them as members to whom ongoing services can be provided over a long period time. In addition, PC DEPOT's direct running of PC Clinics facilitates

---

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

the agile management of PC Clinics. That is why the Company changed its policy and began managing PC Clinics directly.

### **A mechanism that is impossible for others to copy**

The industry has acknowledged that the business model at PC DEPOT is unique and has high earnings capability. Competitors have started to open stores similar to SLP stores. Since these competitors have not established a system or trained employees to provide premium services at the same level as the Company, the competition has not really become serious.

The Company is a retail service company for personal devices that provides solution services under a membership system. With no other companies pursuing a solution-service-based business model in the same manner as the Company does, the Company is building up the one and only business.

Even if another company tried to provide such services, it would be extremely difficult to (1) train the personnel required for technical services, (2) tolerate a decline in profits in the early stages due to the shift to a service income type business, and (3) provide an extensive service menu, from now. Thus, we may say that the Company's superiority over its rivals is significant.

Service income tends to increase in accordance with new PC sales. Moreover, service income has increased rapidly along with increasing sales of smartphones and tablets. An individual does not have only one device, but multiple devices. Also, families own multiple devices. Needs for dependable service arise in accordance with the number of devices owned, which makes it easier for the Company to have such users as regular customers.

The Company provides services by assigning experts in each service category and having them work as a single team. It has spent more than 10 years developing this system, which has become a business model that constitutes part of its corporate culture.

### **Establishment of intellectual assets: Knowledge, router, and cloud services**

There are three notable items in terms of unique intellectual assets. 1) Store staff are connected by transceivers and can talk to staff at the knowledge center at the head office. The Company obtained a patent for this cyber system 11 years ago. The system has been making significant contributions to information sharing and improvements in customer services. 2) The Company also obtained a patent for router technology (SSW and SGW) four years ago. Customers can receive services without bringing their routers to the store counter since store staff can produce a home Wi-Fi environment at the store counters and can complete the settings. Customers can receive Wi-Fi services through routers without any trouble. 3) Regarding cloud services, the Company has obtained a patent for identity authentication performed when cloud services are provided. Moreover, the Ozzio drive cloud service

---

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

is now patent pending. Since data in PCs and smartphones is automatically stored in the cloud, customers can easily recover data at the time of failure or during replacement of equipment.

### **SLP stores are fashionable and convenient: Specialization in services**

The Smart Life Nishimagome Store displays less merchandise than a conventional store. It instead has spacious customer counters. Tablets now occupy more of the display shelves. The store format is based on the Company's new store concept, "providing services that customers need in a single package instead of simply selling products."

The variety of professional accessories in a store may not satisfy the needs of PC aficionados, but this poses no problems as customers can ask for an item at the store counter and the store will obtain it for them soon after. The name of the counter for responding to customers' needs (such as computer repairs) has been changed from PC Clinic to Dr. Smart, and staff members now wear a new uniform.

People want to use the IT services they need immediately without having to deal with anything inconvenient. Tablets and other devices are provided with content services pre-installed and with all the necessary configuration completed. This convenience allows customers to use their tablets with these services without having to do any cumbersome preparation. The customers neither need to configure the initial settings while staring at user guides nor need to call several call centers asking for help.

The Company also advises customers on Internet connections and fees for each PC, smartphone and tablet that they are now using, thereby allowing them to lower the fees for all of their devices or to switch to more convenient service packages.

The "Smart Pack" billing plan is also coming into wide use, which includes a hardware device, software, and Internet connection in a single package. This package allows customers to use hardware, software and an Internet connection by simply paying a monthly fee instead of having to buy a hardware device and paying a monthly fee for the necessary software and Internet connection. Although this is a type of loan of an amount determined by subtracting the product's estimated residual value at the end of the loan term from the product's sticker price, as customers are familiar with the billing plans of Japanese cell phone carriers, which require a two-year subscription, they find this system acceptable.

The Company has embarked on full-scale store innovation. The PC DEPOT logo includes the terms "Low Price" and "The Computer Superstore," and its image is that of a PC supermarket, but in some areas this image no longer reflects the reality. Therefore, these two terms were removed from the logo of the new stores.

Smart Life stores will not just sell products; they will create packages and provide customers with

---

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

the solutions that they want. Their customers will become members who will use the services they offer over long periods of time. PC DEPOT's president, Takahisa Nojima, stressed that the approach for Smart Life stores will not be to simply display products and ask customers to choose the ones they like. Instead they will be offered a one-stop service to provide them with the Internet communications that they want. Consequently, the atmosphere of these stores will be different to that of conventional stores and customer counters will be placed centrally within them.

Inventories decrease in Smart Life stores. By helping free customers from the burden of choosing products and services themselves, the role of these stores will be to provide the services needed by customers, as a result reducing inventories. However, a fixed level of account receivables will accumulate on the balance sheet because the merchandise will be in the form of packages made up of hardware, software, and content, with sales being collected in the form of monthly charges.

### **Gaining service members by troubleshooting for our customers**

In-store arrangements like those of SLP stores are found in Europe, but the Company's business model, which allows it to retain customers mainly through providing services, does not exist either in the West or in Asia.

The inspiration for this business model dated back more than 10 years. At first, the Company started by giving preference to customers who were not familiar with PCs. In those days, there was a perception that PC users were somehow a different "tribe" or subculture of people. President Nojima, however, aimed to make customers of people who were not skilled at using PCs. He tried to provide free help to people who were unable to use PCs easily and those who wanted to reset their frozen PCs.

Next, he gave priority to serving "people who have difficulties." He dug deep into the technical support business and made it a tool for differentiating his company from others. Thinking that it would be more convenient to receive service continually by paying monthly fees than paying fees every time a technical problem occurred, he launched a monthly fee system in 2006. Today, the service has been refined into a scheme that can provide services when users face any technical trouble. The convenience of the premium service has been enhanced as more women and families use PCs.

The Company is committed to increasing the number of its premium members. Detailed data is collected and tracked for each area, in order to maximize the number of customers who become premium members when, for example, they buy a computer, visit to have a repair done, or replace their PC.

Premium members are increasing at a very high rate. However, this does not make money in the short term. The Company needs to make an up-front investment for each router which takes a year to recoup from the monthly premium service fees. However, once the initial outlay has been covered,

---

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

profit is generated at a fixed rate from the second year onward.

The sales of services are growing steadily. What this means in practice may be somewhat difficult to understand for people not directly involved; however, the Company's policy is clear. Sales incentives like those given by manufacturers for product sales are included in product sales. Sales from premium services, repair, maintenance, and one-off service plans are classified as service sales. The Company provides such diverse services that it is difficult to analyze the details of its service sales by disaggregating sales data into the number of service subscribers and the average unit price of services provided. This is because the number of customer and prices are not the most significant factors in this context.

The Company does not release information on the number of members, but given the variety of services it offers and the increases in the number of services and devices it supports, it is likely that the number of members is increasing by about 20% a year.

### 3. Medium term business plan: Full rollout of SLP stores providing solution services

#### **Increased numbers of customers despite sluggish sales of PCs, tablets and smartphones**

The market of PCs, tablets, and smartphones is saturated, and sales volumes are expected to decrease. However, demand for the Company's services has been increasing and has been barely affected by the sluggish sales volume in the market.

Changes constantly occur in the industry such as the launch of new products and services, and the termination of existing services. As a result, more customers seek support since they cannot master how to use peripherals and software as well as PCs, smartphones, and tablets. Since the Company's services are not available in many people's neighborhoods, the Company should be able to acquire new customers by opening new stores.

While PC sales are decreasing at PC Depot, more customers are visiting the stores, and the number of premium service subscribers is increasing because of this. One issue is how best to provide services to customers. In the Company business model, stores solve the difficulties customers are facing and earn revenue in the long run by providing solution services. The time required to serve each customer becomes longer with good customer service. Higher customer satisfaction will result in a good relationship between the stores and customers. Quick customer throughput is not the priority.

#### **Opening a large number of SLP stores by renovating existing ones**

The Company plans to continue renovating 10 existing stores and to reopen them as SLP stores.

---

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

The Company also plans to open five new SLP stores. SLP stores will be more focused in central Tokyo than is the case for existing stores.

Store development history of PC DEPOT

Number of stores at the end of each FY	(Stores)										
	1994	1999	2004	2009	2010	2011	2012	2013	2014	2015	2016 (forecast)
PC DEPOT											
Directly managed	1	10	28	43	44	48	50	46	36	28	18
SLP stores								4	15	25	39
Subsidiaries				4	4	12	11	11	13	13	13
FC		8	32	17	17	5	5	5	3	3	3
PC DEPOT PC Clinics											
Directly managed					30	46	49	49	52	52	57
Subsidiaries						1	1	1	0	5	5
FC				24	6	7	7	7	6	1	1
Total	1	18	60	88	101	119	123	123	125	127	136

NOTE: SLP stores include both new and renovated stores. Some directly managed stores have been renovated so as to be changed into SLP stores, and thus the relevant numbers have decreased. Ten stores are projected to be renovated in FY2016.

SLP stores transformed from existing PC DEPOT stores already have a certain level of recognition and regular customers. The key to their success is how many new service-oriented customers they can acquire. SLP stores can be set up even if the location is less than favorable.

Firstly, the Company has been increasing SLP stores mainly through renovation. As the service grows, and the percentage of total sales that it represents increases, profitability will further improve as a result. Costs for renovation are lower than those for opening new stores. Moreover, a marked impact can be noted. Comparing the situation before and after renovation, the profitability of renovated stores is about 20% higher than that of existing ones. The expenditures required to open a new store with an area of 400 to 500 *tsubo* could be used for the renovation of four stores each with an area of 300 *tsubo*. Furthermore, the probability of recouping investments is higher, and the returns are also higher. Therefore, such moves are given first priority.

On the other hand, there remains considerable room for new SLP store openings. As a new-type store with emphasis placed on providing services, we can estimate there to be approximately 200 locations where these stores could be opened. The Company will first open stores primarily in the Kanto region to enhance its brand power through providing community-based services. The Company reckons that it requires 100 to 200 *tsubo* of land in Tokyo's 23 wards and 200 to 300 *tsubo* (1 *tsubo* = 3.3 sq. meters) of land in the greater Tokyo area if it plans to effectively open an SLP store in a vacant space. However, the Company has learned that SLP stores can be opened on even smaller areas of

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

land.

### **New SLP store openings: Setagaya-Kinuta**

The Setagaya-Kinuta Store was the first new SLP store. Customers are gradually increasing. Many customers are bringing in hardware purchased from other companies for repairs, increasing the store's customer base. This store was launched on a full-fledged basis in March and the Company invested around 400 million yen in this store opening due to its wide floor space of 300 *tsubo*. However, this is an exceptional case. The Company usually invests roughly 200 million yen in stores with a floor space of 100 to 150 *tsubo*, and roughly 40 million yen in stores that have all their fixtures and furnishings.

Since this is the first new SLP store, not a renovated store, the store does not have any existing customers. It is not attempting to attract customers with product sales as traditional PC DEPOT stores do. Instead, first the store encourages customers to visit and then it attempts to gain their acceptance by providing them with services in which they can readily seek advice if they encounter any problems. It may take some time for the store to build up its popularity; however, customers will start counting on the store when they have difficulties with their smartphones, PCs, and tablets. Local residents will appreciate having such a store located in Setagaya.

### **Toward Aoyama in central Tokyo: Aiming to be a flagship store**

Many people want the solution services provided by PC DEPOT. The Company launched the Aoyama Store in December 2015 and the Azabu-Juban Store in March 2016 as city-center stores in Tokyo. These stores target new customers living in central Tokyo. Customers visiting the Aoyama Store live in the neighborhood. More female customers than expected are visiting the store. The number of customers is increasing, and a generation of people somewhat younger than seniors is visiting the store.

Both the Aoyama and the Azabu-Juban Stores started to steadily acquire regular customers. Customers are increasing, and one of the reasons for this is that an SLP store was introduced on TV (in the program called "Gacchiri Monday" broadcast in May 2016). That said, public recognition of SLP stores is still low. SLP stores value serving customers on a one-to-one basis to solve customers' problems. If customers who are not reasonably familiar with PC DEPOT are kept waiting due to a sudden increase in customers, this may give them a negative impression. For this reason, the Company is endeavoring to steadily expand SLP stores.

The Aoyama Store was opened in December 2015 and is located on the first floor of the new Aoyama Quartz Tower (a comprehensive medical facility). This will be a new small-sized SLP store and the first store within the circle of the Yamanote Line. The Company will make a base of members

---

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

by targeting people living within a two-kilometer radius of the store. The Aoyama Store is located in a premium location along a main street. Company President Nojima believes that the Aoyama Store will be a symbol of the SLP store, and other stores to be opened in central Tokyo will not need to be situated along a main street if people living within one to two kilometers can locate it easily.

The Aoyama Store will occupy two floors with a space of 70 *tsubo*. The prices of solution services rendered by the Aoyama Store will be higher than those of other stores. In other words, taking the type of customers into account, pricing will reflect the convenience of the store. As customers will not visit this kind of store if they do not need the service, the Company will be more selective about its target customers.

Located in central Tokyo, this store will provide high-quality services and support fitting the area. Thus, service fees may be determined under a different pricing structure. Instead of competing with low-cost BICCAMERA INC. services, the store will attempt to establish unique, high-quality services and branding. Also, the store expects people visiting central Tokyo to visit PC DEPOT SLP in Aoyama to learn about its excellent services, enticing local SLP store visits.

### **City-center small type stores and acquiring regular customers**

New stores in Kinuta, Aoyama, and Azabu do not have existing customers and will need more time to develop new customers. This takes more time than in previous store openings that focused on product sales. However, once the stores gain customer trust, the relationship will last a long time since the relationship starts from customer demand for services. The prospects for the business will be certain after a one-year period. There should not be much of a problem in making the new stores profitable.

Unexpectedly, some customers are in the younger generation in central Tokyo. People in the grandparent generation also bring their grandchildren. There are growing numbers of people of a younger generation who do not use PCs but instead use only smartphones. In some cases, grandparents and parents know about PCs better than they do. These people visit stores and receive services as customers.

Types of stores launched can be categorized as Version 0 (V0), Version 1 (V1), and Version 2 (V2). An example of V0 is the Azabu-Juban Store, which is a very small store. This store focuses on services, and product lineups are limited. Even so, the store will be moderately successful due to its location close to the station. An example of V1 is the Himonya Store, which is a little larger and has more product lineups. The Company will start more aggressive operations in the city center with these V0 and V1 type stores. Large stores are categorized into V2, and the Inagi-Wakabadai Store is now operating on a test basis. Once the Company is confident of business prospects for large stores shifting

---

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

to SLP stores, the Company's large stores will be able to enter a new phase of development, and demand for services will further increase. The Company will open new stores in central Tokyo, focusing on five urban districts: Shinjuku-ku, Shibuya-ku, Chuo-ku, Chiyoda-ku, and Shinagawa-ku.

### The ongoing shift to SLP stores has been extended to large-scale stores with the Inagi-Wakabadai Store now being tested out as the first store of this type

Large PC DEPOT stores with services provided at SLP stores are Smart by Solutions. This type of store was first opened in September 2014, and the stores numbered 16 by the end of March 2015, and 31 by the end of March 2016.

The Company introduced Smart by Solutions (S×S) at the Tomisato-Interchange store in Chiba. This store has been installed with a counter that, similar to that in SLP stores, has the blue signboard of large conventional stores, not orange as in SLP stores. Large PC DEPOT stores are renovated with a Smart Counter installed inside, as in SLP stores. Although the size of stores renovated into SLP stores was up to 300 *tsubo*, the Company is making a different attempt with larger version 2 (V2) stores.

Forecast number of new PC DEPOT store opening

		(number of stores)						
		2011.3	2012.3	2013.3	2014.3	2015.3	2016.3	2017.3 (forecast)
PC DEPOT	Directly-managed	1	4	3	0	0	0	0
	SLP stores				0	1	3	4
	Subsidiaries	0	6	2	0	2	0	0
	FC	0	-12	0	0	-2	0	0
PC DEPOT								
PC Clinic	Directly-managed	30	16	3	0	3	0	5
	Subsidiaries	0	1	0	0	0	5	0
	FC	-18	1	0	0	0	-5	0

NOTE: New directly-managed stores are SLP stores. PC Clinics depend on projects with partners.

Figures in parentheses for PC DEPOT indicate the number of FC stores that became PC DEPOT's subsidiaries.

In the term that ended March 2016, the FC stores became PC Clinic's subsidiaries.

In September 2015, the Inagi-Wakabadai Store, formerly a conventional PC DEPOT, was renovated into a new SLP store. It is a large-scale store with a floor space of 500 *tsubo*. The store was designed and arranged in such a way as to enable customers to experience IoT. Many of the major consumer electronics superstores are operating around this store. This store, mainly providing services, needs

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

1.5 times the manpower of the former business format. The Company is aiming to differentiate the store by providing a service that the superstores cannot replicate.

This large SLP store will focus more on IoT visualization, compared to conventional stores. Since the store has sufficient space, it can offer 120 seats. The Setagaya-Kinuta Store has 85 seats. Moreover, customers can try out IoT devices allowing them to experience Smart Life.

While renovating stores with floor space of 300 *tsubo* costs 70 million yen, converting stores with floor space of 500 *tsubo* into SLP stores costs roughly 100 million yen. If this store is successful, converting large stores into SLP stores will expand.

Main menu of the principal premium services

	All device family plan	All device family wide plan

### **Response to service demand, “upgrading customers,” and adopting new prices**

Customers receive various services. Therefore, it is not appropriate to consider the Company’s service fee income by looking at the number of members multiplied by the average membership fee. Some customers visit stores for repairs, others for specific services. Some customers subscribe to premium services and then once they have received the Company’s services, they come to realize that being maintenance-free is advantageous, and that additional services would also be useful. More customers will use the cloud service. What is going to happen next? As the quality of services is improved, customers will be upgraded. In other words, they will increase their monthly fees to use the services.

The Company plans to steadily expand service lineups and move to new prices corresponding to service expansion. The focus is shifting to improved software with increased security and improved usability with increased router speed.

Fees for premium membership services were revised in January 2016. In March 2015, the Company launched a member support system, called JIMAS, which comprehensively increases the efficiency of services. (JIMAS stands for *Jitaku* (home) Internet device Multi-Assistant System). Customers are invited to join the service with a device management system. Under this service, the condition of certain devices is constantly monitored with a dedicated application installed on the device. If a device is lost, it can be locked remotely. These services allow the Company to manage digital information and store it as customer records. Using these records, customer service can be further enhanced.

### **Stepping up efforts to provide solutions**

The future sales policies of the Company are to (1) step up smartphone sales and (2) concentrate on providing solutions. As smartphones sell well, the Company is required to provide solutions to support them. Recently, an increasing number of users have printed directly from their smartphones and tablets using printers, and this encourages better sales of printers. The Company has started to provide services that enable customers to use a printer at a monthly fee of 500 yen rather than purchase a printer for 25,000 yen. Thirty percent of the Company’s customers acquire a printer through this type of service.

NTT East and NTT West have started wholesaling optical line services. These services allow other companies to lease NTT’s networks to provide fixed-line services under their own brands as fixed virtual network operators (FVNO) like mobile virtual network operators (MVNO). Up to now, the Company has acted as an agency for optical lines, but from now on it will provide them under its own brand. From the Company’s router onward, the same line can be used, and therefore, NTT’s optical line will be replaced by the Company’s own. Since it can incorporate these into the premium services,

---

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company’s position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst’s opinion of the Company, and all unauthorized usage hereof is prohibited.

the Company can improve its overall services without any particular difficulties.

The Company will take leadership in supporting these services of NTT's. Sales competition is likely to become intense, but in terms of how to use these services efficiently, there is ample room for the Company to expand service demand by enhancing its service functions. This will provide the Company with new business opportunities.

Specifically, the Company can (1) provide hardware maintenance services for smartphones, (2) offer services associated with smartphone replacement, (3) lower communications fees by incorporating FVNO services into its premium services and (4) help users to achieve greater efficiency in home communications hardware and software. These services will be useful to users. The Company will be able to charge higher monthly service fees that correspond to such services.

PC DEPOT high-speed optical line  
(Optical Internet service as an FVNO)

- The Company has developed "OZZIO Hikari" as an FVNO (fixed virtual network operator), starting in February 2015.
- It is being integrated with the Company's MVNO services, such as premium services, support services, content services and low-priced smartphones.
- OZZIO Hikari is provided by the Company by buying wholesale optical lines from NTT.
- The Company's premium members can get a good-value set of services and enjoy the convenience when they change from NTT's optical lines to OZZIO Hikari.

### Increased added value with FVNO

It seems that a few thousand customers a month are joining the service using FVNO. When customers switch to the Company's fiber-optic network service, a communication fee of 4,000 to 5,000 yen per month is recorded as sales from services. While profit margins will be higher compared to conventional agency commissions, profit ratios for services will decrease.

FVNO's service provision using optical lines is an epoch-making change. In the 30-year history of the privatization of NTT, sales of mobile phones have increased, centering on NTT DOCOMO, while fixed telephone lines have been on the decrease. Under such conditions, NTT East and West first tried to expand optical network lines on their own; however, later they completely changed their policy.

In short, they decided to terminate their retail business and devote themselves to wholesale business. As the optical lines of NTT are sold on a wholesale basis, it has become possible for anyone to in

---

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

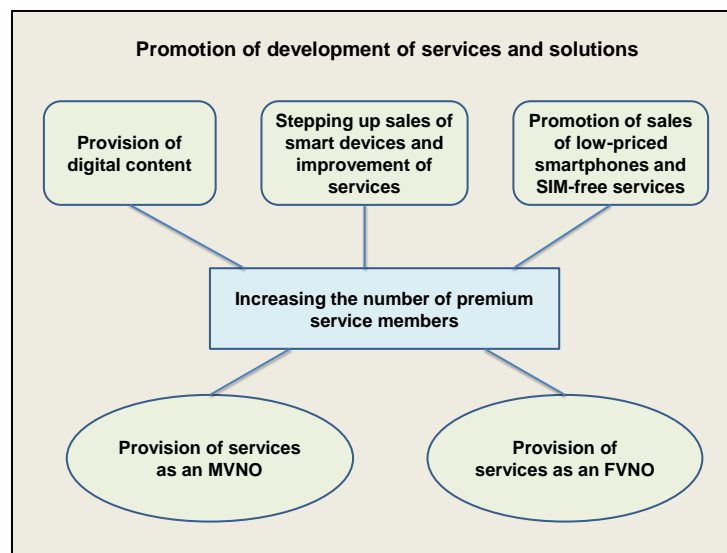

initiate retail services. NTT DOCOMO is able to provide services for both mobile phones and optical fixed telephone lines, while other companies in various industries also sell optical fixed telephone lines at retail among their services. In that sense, competition will become fierce, but the Company can greatly expand the range of its services and products.

FVNO services will also support fixed-line services. So far, the Company has provided services by attaching its Wi-Fi router to the tip of optical fiber lines, but now it has become possible to provide services including fixed optical lines.

The Company will have to compete with mobile phone shops of carriers in FVNO services. In the competition, each company will make the most of its characteristics. The Company will have existing members subscribe to FVNO services and communicate the advantages of the Company's unique services to customers.

An increase in the menu of services means an increase in the number of people who cannot use them properly, which may lead people experiencing difficulties to PC DEPOT. To compete with carriers' shops, we may have to use incentives (sales promotion expenses).

PC DEPOT's unique services using optical fixed telephone lines have a good reputation. Customers can check faxes that have come to their homes via their smartphones, use their smartphones as cordless handsets at home, and make telephone calls and send faxes within 10 minutes 300 times a month without paying any surcharges. Customers can use these services at the cost of 2,000 yen per month by subscribing to the Company's optical Internet services.

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

### **Robust sales of services—“Just Show up and Buy a New PC”**

Service sales have remained firm. In the past, it has been a common pattern for the sale of devices to lead to the sale of premium services. After premium services have apparently improved, service sales have increasingly contributed to the profit growth.

In addition to MVNO, FVNO has entered the market. Thus far, people have visited PC DEPOT only when they need something related to PCs; however, from now on, they may visit PC DEPOT for any types of Internet devices, including smartphones, tablets, printers, and fax machines. Unlocked SIM services became available from May 2015. The service costs 2,000 yen per month. Optical fixed line service costs about 5,000 yen per month. A certain contribution to profits can be expected from the second or third year if these services grow.

Under such conditions, the key is the cloud. The Company will launch full-fledged “Comprehensive Cloud Services.” Now that stable server operation has been secured, the Company will be able to provide new services going forward. One of the representative new services is “Just Show up and Buy a New PC.” The Company has begun to provide its premium members with an automatic data backup service for Internet devices such as PCs and backup data reproduction services at store counters using a patent-pending proprietary comprehensive cloud system.

As data on PCs are backed up, when you buy a new PC, you don’t need to bring your own PC to the store to take data from it. Customers can have their new PCs ready for use without difficulty as the general mirroring service (backup of the same data on the cloud) provided by the Company allows them to save the data on their PCs on the cloud. Their smartphone data is also saved on the cloud via PCs. Investments in such services do not necessitate much money. It is not a big investment compared to that involved in the creation of a new store. The Company can expand this service gradually.

It will be difficult for other companies to offer the same service. The Company has enhanced the PC Clinic functions at its stores. It has trained and developed engineers with expertise in PCs, smartphones, and the Internet. We have already created a mechanism through which we can make profits. Even if mass home electronics retailers try to imitate our model, it is impossible for them to develop the same functions by deploying such personnel at their stores.

### **Original development of content and services: more than 50 types of digital content services**

The Company has been evolving its business model. The Company is focusing on developing content and services that are compatible with Internet devices and providing them as solutions to customers. In fact, one of PC DEPOT’s ideas is to install digital versions of specialist magazines onto a tablet and offer them as a package at an affordable price. The users have the content that they want immediately, in addition to being able to use the tablet freely.

---

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company’s position on the matter herein. NOTE: All monthly fees are standard prices, and discount prices are also shown if available.  
Prices of packages depend on combinations. The iPad Air is the 16 GB/Wi-Fi model.

Customers can purchase a Lettuce Club package with content published twice monthly at 329 yen per issue and an iPad Air (16 GB Wi-Fi only model) for a monthly fee of 1,000 yen. The contract period is for three years. If a consumer purchased these two items separately and for the same period of time as the contract, it would cost almost 60,000 yen. But with this package, customers do not have to pay that much. The Company aims to package and offer services that customers want in order to retain them as long-term customers.

The unique service of distributing digital magazines through tablets has further spread throughout the market. *Nikkei Business*, *Toyo Keizai*, and other magazines are now available in this way. What is more, a subscription for a certain period results in lower costs than those for print-based magazines and newspapers.

LEVOLANT is a specialist, colorful car magazine for motor enthusiasts. The price of the magazine is 1,010 yen a month, but if readers pay a subscription price of 1,200 yen a month, they can get an

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. iPad Air as well. Books and other publications can be heavy to carry around, but this package allows them to be read casually anywhere.

The reason why this package is being offered at a lower price is because the Company has capabilities in the area of content package services. If consumers already have iPad Airs, all they need to do is to buy the digital version of this magazine. They can of course buy an iPad and the magazine separately, but doing so will cost them more than 1,200 yen a month. The publisher of LEVOLANT could sell this package themselves, but they are unable to provide users with support until they master their device. On the other hand, the Company provides a one-stop service and offers support to users whenever they need it. This service is also convenient for content providers as it helps them to increase their digital audience. More than 50 kinds of packages are already being offered.

### Need for specialist services surviving a reinvention of Internet devices

There is an accelerating trend for the position of leading player in personal communication to be shifted from personal computers to smartphones. Cloud systems will become the main infrastructure. Computers used to be at the center of the internet, but are now giving way to net devices embedded in appliances, cars and homes, making them useable anywhere. Software is required to control such

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

functions, and services are also required to make full use of this software. The Company is committed to the provision of these services, and has set as its objective the adopting of a strategy to expand its business to cover internet devices, and to not limit its services to computer-orientated ones.

In today's digital era, Google, Microsoft and Apple are the Big 3. With these three top players at the center, Takahisa Nojima has established the fundamental policy for PC DEPOT as "helping users to resolve their problems."

### **Full-fledged premium services for smartphones**

Major carriers have unlocked smartphone SIMs. Up to now, the subscriber identity module (SIM) cards for mobile phones in Japan have been locked. In other words, the SIM card, which records information such as phone numbers that identify individuals, can only be used for a particular mobile phone.

Overseas, any mobile phone can be used as one's own phone merely with the insertion of one's SIM card. In other words, if one has a SIM card, one can easily buy new smartphones. One may own two to three smartphones allowing their use for different purposes.

The Company released low-priced smartphones with services included. How should the Company go about selling these? Meanwhile, customers having problems installing Windows 10 are bringing in PCs one after another for service. Customers with hardware purchased from other companies also come to PC Depot. A free download of Windows 10 is available up until the end of July. How should the Company provide services for such customers?

Premium services were added to PCs and premium services for smartphones are now provided on a full-scale. Low-priced smartphones are being released simultaneously on the market. Even though customers purchase low-priced smartphones, many of them may not know how to use these phones if the Company merely sells hardware as a MVNO. The selling point for low-priced smartphones is not just the price but also the fact that they come with services included and this has made them popular.

#### Original smartphone: JUST PRICE FON

- 7 models are released in April 2016. Contract period is 3 years.
- Smartphone (hardware), MVNO, and premium services are integrated.
- Types of monthly charges are 1,990 yen (1 model), 2,990 yen (3 models), 3,990 yen (2 models), and 4,990 yen (1 model).
- The charges include payment for smartphones and premium support fees.

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

The Company started to sell Just Price Fon at the end of April 2016. This original smartphone sold by a MVNO comes with support for premium services. Stores offer seven models at monthly charges of 1,990 yen, 2,990 yen, 3,990 yen, and 4,990 yen.

Demand for premium services especially for PCs is growing and the number of subscribers is increasing. One subscriber receives multiple services with the PC as the base unit. Nowadays it is common for one household to possess multiple PCs and smartphones.

Moreover, the needs for multiple support on a base of smartphones without PCs are increasing. Some people have purchased low-priced smartphones at other mass home electronics retailers but found they could not use them easily. More and more of these people are visiting the Company stores for support. Just Price Fon is so to speak, a “moderately priced smartphone.” This was released under the Company's own brand label. Hardware, software, and support are integrated into this service.

#### Various IoT support is available

The number of units sold of PC, smartphones and tablets is decreasing in the industry as a whole, presenting an unfavorable trend. However, the Company, which is selling solutions coupled with support and services, has performed well as sales from services are increasing, even though the number of units sold is declining.

The new IoT technology will rapidly spread to homes. President Nojima believes that the base of the technology is in PCs. To put it more plainly, he believes that the area where the Company's engineers and support teams play an active role will expand rapidly.

If IoT devices start to be used in various areas including watches, healthcare, and residential

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

gateways, their services will be needed. For instance, when a customer buys a smartwatch, the person can choose from several options, such as buying the unit alone for 50,000 yen, or paying a monthly fee that includes the full setting to connect with smartphones, and after-sales maintenance.

The Company is developing services, one after another, including a device lock in case of loss of the device, smartphone data automatic storage in the cloud, and backup systems that connect smartphones, PCs and the cloud in a system. Patent applications have also been made.

To make full use of IoT, there will be a variety of service-inclusive products with a monthly-fee membership, like Premium Service Solution & Things. Use of devices such as smartphones expands new connectivity in areas including healthcare, wearable computing and networks, security, entertainment, and content, and it develops new uses. Contract details including liability exemptions are expected to change.

Examples of IoT include health control using data transferred from OMRON Corporation scales to smartphones, connected to Panasonic Corporation fax machines, allowing users to view fax content via smartphone.

The Company will pursue IoT for personal use, maintaining PCs as a platform. Companies such as Google Inc., Apple Inc., and Amazon.com, Inc. will begin providing new services. Robots will be used in homes. Under any circumstances, the introduction of a new network will require new support. This is the Company's raison d'être in specialized areas.

From the end of March 2016, "technical services/fees" changed to "solution service sales" due to an increase in sales of products that integrate hardware and software services. Another reason for the change is an increase in services with printers, iPads, and fiber-optic networks.

### **In new solution services, accounts receivable from sales including service fees are on the increase.**

In SLP-based businesses, it takes three years to collect the full amount of revenue from products and services. Products sales are recorded under accounts receivable, which increase as SLP-based sales rise. For example, iPad Air + magazine sales are growing. They are recorded first as product sales and then as service sales. The monthly fee charging service for tablets and printers is designed to sell hardware first and then collect its price through monthly fees. In other words, this means that accounts receivable grow on the balance sheet.

This accounts receivable item grew by 600 million yen in the term ended March 2013, by 1.9 billion yen in the term ended March 2014, by 4 billion yen in the term ended March 2015 and by 3.8 billion yen in the term ended March 2016. For the time being, the balance of accounts receivable will continue to increase at the rate of 4 billion yen per year. Worded differently, the Company needs more working capital as such accounts grow. If the Company makes progress in collecting monthly fees, however,

---

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

the amount of working capital needed will not increase as it is currently doing because a balance between outstanding accounts receivable and required working capital will be gradually achieved.

An increase in accounts receivable will also require enhanced credit management. With regard to sales at conventional merchandise stores, the individual credit risks arising from customers paying by credit card are assumed by the credit card companies, but such risks accompanying sales at Smart Life stores must be taken on by the Company. In the event that a customer becomes unable to make monthly payments for any reason, the Company will have to assume his/her debts.

In principle, as the Company sells products and services to individual customers who use IT products, it performs identification and usage checks very carefully before sale. Volume sales to corporate customers are outside the scope of its business. In many cases, the Company may turn down a bulk purchase even from an individual customer because it is unsure whether such products and services are actually for private use. As is obvious from the above, credit risks are well controlled by stores and therefore there is no need to worry about such risks.

#### **Transition to store operations with extended authority**

The primary aim is personnel recruitment and development. Regarding store management, the Company is endeavoring to break out of the conventional way of operating chain stores. Stores cannot really help out their customers on the ground by following a manual written by head office and handed down from on high.

The Company is endeavoring to implement independent store operation by assigning a store manager, a staff member responsible for technical services, and a staff member responsible for management at each store. Stores devise services that are responsive to local needs in terms of products, promotions, and home visiting services. Although this may seem inefficient, independent decision-making by stores has been definitely seen to lead to increased revenue.

Each employee provides unique services for customers with his/her specialty at his/her own post as a member of a team. This new store management system is being introduced to five stores in the term ending March 2016. After April, eight stores will operate under this new store management system. The Company is planning to continue increasing the number of personnel, providing appropriate training.

#### **Focusing on human resources development**

The Company is hurriedly expanding personnel for new store openings and renovations. In April 2016, the Company hired 110 full-time employees consisting of 40 new graduates and 70 employees switching from part-time to full-time posts, and plans to increase these to 100 and 80 respectively next

---

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

year. When hiring employees, the Company emphasizes an ongoing learning attitude, curiosity about new experiences, and relationships with their parents. Of importance to the Company in the assessment of personnel is taking good care of their parents and the ability to communicate. At the same time, the Company ensures that their parents learn more about PC DEPOT where their children work.

When hiring employees, the Company requires that they submit a project. Upon employment, the Company seeks to foster employees capable of active learning in an environment full of technological changes.

Location and human resources are key factors for store development. With the Company's services, people always contact consumers by analog methods, and this is where a benefit can be found. Users pay monthly fees because they feel the convenience of a certain frequency of use. It also intends to increase its part-time staff by 300 people annually. In other words, along with the growth of the service business, it is necessary to increase the workforce at a certain rate. Moreover, this increase in the number of workers should occur ahead of business growth.

The Company is conducting HR development to support its new-store openings. PC DEPOT has attracted employees who like PCs. It also has many female employees. Its female employees have expertise in hardware, software, as well as in their usage, reflecting that working at PC DEPOT is worthwhile and fulfilling to both women and men. Employees receive training and the Company is able to staff the PC Clinics that it opens.

The Company does not impose any quotas for individual staff's sales and service performance. Instead, everything is handled on a team basis. A team consists of three to five people and, for example, there may be five teams in a store. The management concept behind this is that the team members can share their experience and thereby raise each other's levels of competency. Employees' attitude and responsiveness to customers is the key. Part-time workers who have worked for the Company for a long time are proactively promoted to full-time positions.

Another point is the stores' use of "cyber operations." This was originally a kind of risk management scheme through internal monitoring, by which the on-site staff and the head office can be connected via Internet telephone and they can ask each other about anything at any time. Support for services can also be provided from the head office. If an on-site staff member has a problem, another person in the store can immediately go and provide them with support. Being able to respond quickly in this way improves service capabilities, while customers feel they are being dealt with kindly, politely, and quickly at PC DEPOT stores.

### **Active use of part-time working seniors**

Stores are employing working seniors who provide better customer care, use polite, well-mannered

---

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

greetings, have a tidy personal appearance, and provide good customer service. The number of part-time working seniors will increase to 150 by the end of the term ending March 2016. One or two working seniors will be assigned to each store.

Hiring senior aged part-time workers employs people aged 55 to 75 in second careers. These workers will: 1) advise customers; 2) improve store conditions and security; 3) provide health management and career advice to young staff; and 4) apply their experience as specialists in technology or sales. This unique system is attracting attention from the market.

Changes in gross profit of products and services (provisional)

	2013.3		2014.3		2015.3	
	(million yen, %)					
Overall sales (consolidated)	51353	100.0	53816	100.0	51285	100.0
Service sales (consolidated)	12616	24.5	16237	30.2	19720	38.5
Goods sales (consolidated)	38736	75.4	37579	69.8	31565	61.5
Cost of services (non-consolidated, provisional)	3176	25.2	4676	28.8	5916	30.0
Overall gross profit (consolidated)	16134	34.2	18429	34.2	19676	38.4
Service gross profit (provisional)	9440	74.8	11561	71.2	13804	70.0
Goods gross profit (provisional)	6694	17.3	6868	18.2	5872	18.6

NOTE: Goods sales includes other services (royalties, Internet related).

Figures in the column next to sales amount are a ratio of each segment sales to overall sales. Provisional values are not necessarily accurate; these are approximations as reference data.

### The quality of services is its source of competitiveness: active use of “Platinum Partners”

The Company does not merely sell hardware such as PCs and tablets, but offers services. This is a system under which convenient solutions are provided on a continual basis for a monthly fee. 60% of visitors to PC Clinics are those who bought products at other stores. That means they interested in something other than low prices. PC Clinics support PCs owned by our customers, which brings about efficiency.

When considering the profits generated by products sales and from service sales from a perspective of operating profit levels, it is not possible to create a clear-cut breakdown of levels on classified into products and services. The reason why this cannot be done is that the Company’s management does not differentiate products sales and service sales. Even though each staff member at stores has his/her own role, everyone provides both products and services. These sales are not differentiated when assessing employee performance. One pattern used involves a customer buying a product and subscribing to a service, thus becoming a regular customer of PC DEPOT, who naturally comes again to buy some other product.

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company’s position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst’s opinion of the Company, and all unauthorized usage hereof is prohibited.

However, even when profits derived from product sales and from service sales are viewed from the perspective of operating income under certain prerequisites, the structure in which service sales are highly profitable remains unchanged. In the competition to capture this demand for services, the Company has the advantage that is furthered by its track record over the years and its personnel. Originally, the Company core policy of differentiation from its competitors is to provide services requiring time and effort for customers who are having difficulties using their purchases, but not for customers who do not require any follow-up services after purchase. Such customers are the main target of other companies.

### **Response to the rise of internet shopping**

There is a concern that internet shopping might be a threat to over-the-counter sales. In fact, some people browse products at stores, but actually buy them online, as the prices.

This scenario is fine for those users who are able to make full use of their newly purchased hardware. However, others are in great need of convenient services in case they do not understand how to use their new hardware fully or are faced with some problem. That is where the Company has a chance to show what it can do. Basic sales of products such as iPhones, iPads, Nexus smartphones/tablets or Kindles do not make much profit. But if customers subscribe to premium services, the relationship with them can be maintained for a long period time, and service sales will contribute to earnings. In that sense, the Company is continuing to handle new products in a proactive way.

### **Pursuit of lifetime value**

The shift to SLP stores will advance steadily. PC DEPOT has been evolving to achieve a brand new type of format by completing a total makeover of PC mass retailers. After transformation to SLP stores, stores experience changes in comparison from their previous formats, in that (1) customers stay in the stores longer, (2) more female customers visit, (3) customers revisit more frequently and (4) customers consult with employees about various matters.

The extent of sales in terms of customer hardware purchases changes little after renovation. However, sales from providing service are certain to increase. In other words, the stores gain long-term customers.

A short interval between visits means that visitors revisit the store again sooner once they have bought a product or service. Increasing numbers of female visitors represent the fact that needs for digital devices in households have risen and people wish to have a better command of them. In this sense, President Nojima hit a bull's eye.

“Lifetime value” is a concept in which the time span during which a customer uses a product is

---

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

considered to be that product's "lifetime." The value of the customer to the business in a general sense during the lifetime of that product is raised, allowing the Company to generate sales accordingly during that time. The Company's service sales are growing, but in the normal growth pattern for services, they become profitable only in the second or third year of a three-year contract. Service quality should be improved so that members are encouraged to buy more products from the same store. Of course, member numbers are bigger at existing stores than at new stores. New stores have to compete in terms of products sales initially, and then, going forward, they will increase their member numbers.

So, if prices go down in due to competitions of products sales, making profit at new stores would be slower than expected. By increasing members, service sales can be raised, leading to additional profits several years later. The number of service subscription members is increasing, so "lifetime value" of a particular level can be ensured, depending on the terms of the members' subscriptions. PC DEPOT is meeting the challenge of expanding a business model that is dependent on a customer base formed of members who are subscribed to its services. The Company operates while carrying out analysis of its service sales.

#### **Aiming to achieve an ordinary income to sales ratio of 10% and ROE of 15% from the new business model**

As a business outlook for the future, sales of 60 billion yen, a services to total sales ratio of 60%, an ordinary income to sales ratio of 10%, and ROE of a minimum 15% can serve as a yardstick and these appear eminently achievable.

President Nojima has set an ordinary income to sales ratio of 10% and ROE of 15% as the new KPI (key performance indicators). If the proportion of income from services increases in the current business model, the profitability ratio of 10% can definitely be achieved.

While the Company has established a unique business model that other companies cannot replicate, the Company needs to further solidify its new business model for its store-opening policy in order to aim for sales of 100 billion yen and an ordinary income of 10 billion yen in the future. The Company's approach is expected to move in this direction.

Assuming the monthly fee for membership services is five thousand yen, if the number of members grows to one million, the income from services could reach 60 billion yen. If such income from services is attained, annual sales of 100 billion yen and ordinary income of 10 to 15 billion yen will be achievable. How will the Company capture customer demand for those services? The market will be paying attention to its strategy for the deployment of stores and the development of a new service menu.

---

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

The shift to SLP stores has sped up the transformation from a flow-based business model to an asset-based one. Connections between customers and the Company have become stronger. Moreover, giving consultation to customers increases contact with them. Members of the service system exhibit several usage patterns, which cannot be explained only by the number of members and average values such as the average unit price. The conventional pattern has been service on a per-household basis. However, in the age of cloud services, the personal management of data has become important, and accounts for individual users are therefore important. The nature of services will also be further diversified.

In short, that means that the number of members will increase at a higher pitch than ever before, and the unit price of services will also increase. If this happens, an ordinary income to sales ratio of 10% or more is achievable.

### **Challenges for the future**

There are four challenges. The first challenge is to secure locations for opening new stores. The second challenge is the manner of attracting customers. As opening new stores in the form of SLP stores is intended to obtain customers who need services in particular, more ingenuity is required in attracting customers for this purpose than for mainly selling products that the Company used to focus on. Because sales that originate from rendering services to members become the core, the time of the period for recouping investment tends to be longer than in the past. On the other hand, as more and more customers become members, the profitability can be maintained easily once business turns profitable.

The third challenge is employee training. While the Company has been achieving success in technical training, which is its area of expertise, it is important for it to nurture employees in the level immediately below the store manager. For example, to what extent are the staff members responsible for management, store operations, and technical services able to pay careful attention to what is happening over an entire store? In this regard, the Company has been hiring retired and talented office workers as part-time working seniors to raise the level of courtesy and service to customers in stores.

The fourth challenge is governance in its daily operations. Rather than selling products, the stores provide services and then recruit customers as members by providing solution services. On the other hand, products are sold in the form of installment sales accompanied by services. The Company emphasizes a stock-type business, not a flow-type business. In this situation, the governance at stores in its broad sense includes the management of customer information and the full-time and part-time employees, and this management needs to be appropriately implemented.

---

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. #### 4. Near-term operating results: Realizing service sales benefits, achieving record-high profits

##### **What the figures from existing stores tell us. These are difficult to interpret from the number of visitors and average sales per customer**

It would not be correct to view the growth rate in the Company's existing stores based on a separation of the number of visitors from sales per customer. Analysis of the Company's monthly figures is not as simple as that of conventional merchandise stores.

This is because the number of service members grows cumulatively, and these members contribute to monthly service sales. However, since products have actually been sold, sales figures cannot be analyzed based simply on member numbers and Average Revenue per User (ARPU), as is done for service sales of telecommunication carriers. That said, it cannot be denied that service sales owing to this cumulative effect have made a greater contribution to the Company's favorable performance.

Looking at the quarterly-based sales results posted by the Company in the past, when it engaged mainly in products sales, sales tended to be not bad during the first quarter, decline in the second quarter and become favorable in the third and fourth quarters. This seasonal trend is now disappearing because the Company has shifted its focus from selling products to selling services. Thus, the Company's performance should become more stable.

##### **Capital investment and financing: Response to working capital is also important**

With the development of SLP stores, sales of services are growing steadily. Types of customer segments have been changing. The efficiency of fixed assets has been increasing. Capital investment will increase to 1.7 billion yen in the term ending March 2017 compared to 1.3 billion yen in the term ended March 2016. The reason for this is an increase in new store openings. Since the Company still has sufficient funds raised from equity finance, and its earning power has been increasing, capital investment can be covered by internal funds without any problems.

Meanwhile, accounts receivable increased by 3.8 billion yen in the term ended March 2016. Most of this amount originated from installments receivable related to premium services. For example, when a Just Price Fon (a low-priced smartphone) is sold, payment for the hardware of 30,000 yen will be collected as part of the monthly service fees. Namely, the 30,000 yen is the credit sales price.

The rate of increase will gradually slow down from the term ending March 2018 as receivables are collected. The increased receivable amount will stop growing and then start to decrease. The total receivable amount on the other hand will continue to increase, however, this can be managed within the operating cash flow and will not considerably increase interest-bearing debt. Even though the accounts receivable increases, the Company will not remove this from the balance sheet. Since the

Cash and cash equivalents at end-term	2505	2083	2984	4679	2370	4754	4124

NOTE: Forecasts are by analysts.

There are no major financial concerns. So how should the Company make efficient use of its free cash flow from now on? Well, the Company will be able to put more effort into investing in human resources and start to consider R&D-type open innovations. As a financial strategy, the Company considers a sound financial position to be an equity ratio of at least 50% and a degree of indebtedness within 25%. The Company raised 2.3 billion yen through equity financing in January 2014. In terms of the usage of these funds, the Company allocated 900 million yen to opening new stores, 1.1 billion yen to renovating existing stores, and 300 million yen to improving its IT system.

Through the financing from October to November 2015, the Company raised 3,478 million yen through public offering of 4,300,000 shares for a capital increase, and 504 million yen through a third party allotment of 624,000 shares, totaling 3,982 million yen. The usage of the funds can be broken down to 1.5 billion yen for renovation to SLP stores, 1.0 billion yen for new SLP openings, 500 million yen for system investment and 1.0 billion yen for working capital. With the number of outstanding shares increased by 12.6%, a dilution occurred. However, there will be no problem because the dilution can be more than absorbed by growth in profits.

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. ### Further increase in the percentage of sales from services and a rise in the profit ratio in the term ended March 2016

In FY2015, the Company reported favorable results with net sales of 51,784 million yen (up 1.0% YoY), operating income of 4,314 million yen (up 39.7% YoY), ordinary income of 4,366 million yen (up 36.2% YoY), and a net income of 2,867 million yen (up 47.7% YoY). Demand for services further increased in association with the installation of Windows 10. PC sales have substantially decreased by 34%. On the other hand, the sales of secondhand PCs have increased by 5.2%. This is due to customers looking for a PC with Windows 7.

## Changes in the percentage of total sales accounted for by service sales

(million yen, %)

	Term Ended March 2013		Term Ended March 2014		Term Ended March 2015		Term Ending March 2016	
	Service sales	As a percentage of total sales	Service sales	As a percentage of total sales	Service sales	As a percentage of total sales	Service sales	As a percentage of total sales
1Q	3025	24.8	3689	30.3	4495	36.1	5651	46.2
2Q	3083	25.8	3894	31.8	4690	39.3	5992	48.7
3Q	3223	23.5	4215	30.6	5248	38.4	6525	47.8
4Q	3285	24.5	4439	28.4	5286	39.9	6475	47.7

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

The percentage of sales from solution services has increased to 47.7% of total sales. The percentage was 30% five years ago. It increased to 35%, then 40%, and is now approaching 50%. Although existing stores targeted 100%, it turned out to be slightly lower at 99.2%. Gross profit ratio increased from 40.5% to 42.8%. Gross profit from product sales is also increasing due to the Company's expanding support services linked to products rather than taking part in the price competition.

### Maintaining favorable operational results in and after the term ending March 2017

The Company's goals for FY2016 are net sales of 54,000 million yen (up 4.3% YoY), operating income of 4,920 million yen (up 14.0% YoY), ordinary income of 5,000 million yen (up 14.5% YoY), and a net income of 3,370 million yen (up 17.5% YoY).

An increase in service sales raised the percentage of solution services in total sales and this amount will exceed the percentage of product sales in the term ending March 2017. This will be a symbol of PC DEPOT's shift to a stock-type business model with solution services. Since the gross profit ratio will continue to rise, profits will grow despite the small increase in total sales.

The Company plans to renovate five to 10 existing stores, and seven store renovations are budgeted. The Company also plans to open four new stores. The Company already has the prospect of opening these four new stores. The Tokai Store, which opened in March 2016 is a new store. The Mito Store will be relocated and counted as a new store but this reduces the number of existing stores.

In the current term, the demand for the Company's services will be aroused by (1) the effect from original smartphones, (2) the termination of the providing of Microsoft Windows 10 as free software at the end of July 2016, and (3) the termination of support for Windows Vista scheduled in April 2017.

New store openings and shift to SLP stores

(FY)	2012				2013				2014				2015				2016			
	1Q	2Q	3Q	4Q	1Q	2Q	3Q	4Q	1Q	2Q	3Q	4Q	1Q	2Q	3Q	4Q	1Q	2Q	3Q	4Q

SLP stores (new)											1				1	2	1			
SLP stores (renovated)						1	1	2	3	4	1	2	1	2	1	3	2			
Subsidiaries	2										2	1								
PC Clinics																				
Directly managed	1	2									2									
Total	5	3	0	0	0	1	1	2	3	4	6	3	1	2	2	5	3			

NOTE: SLP stores (renovated) indicate the number of SLP stores opened by renovating and changing directly managed PC DEPOT stores. Figures for the first quarter of 2016 are forecasts.

Priority plans for the current term are (1) the promotion of new store openings and renovations, (2) the provision of services for Windows upgrades, and (3) a sales expansion of original smartphones.

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

The Company will open new stores mainly in central Tokyo. Factors that may increase the demand for the Company's services include the frontloaded demand before Windows 10 software becomes fee-based, a release of Apple's iPhone 7 smartphone, and the termination of support for Windows Vista scheduled in April 2017.

Regarding dividends, with a payout target of 20%, the Company is fully capable of paying the increased dividends associated with profit growth. Ongoing dividend increases can be expected.

Comparison of earnings forecasts

	(millions of yen, %)					
	2013.3	2014.3	2015.3	2016.3	2017.3	2018.3

Ratio to sales	29.7	30.0	32.3	34.8	36.3	36.6
Operating income	876	2310	3089	4314	4920	5500
Ratio to sales	1.7	4.3	6.0	7.6	9.1	9.8
Ordinary income	933	2411	3205	4366	5000	5550
Ratio to sales	1.8	4.5	6.2	7.7	9.3	9.9

Sales from solution services are expected to increase by 15% annually. If sales continue to increase at this rate, sales from services will approach 60% in three years. Sales from services are expected to increase. However, an increase in sales from solution services with installment sales of products, such as faxes, PCs, and drones will have a certain negative impact. This is because the gross profit of such solution services is lower than that of regular premium services since the solution services involve products.

The Company will start establishing a system to improve the new business model. The Company will usher in a new phase of store operations from both "hard" and "soft" aspects including personnel at both the head office and the stores. We want to pay close attention to how the Company will put the system reform into concrete shape.

The policies are to (1) step up sales of smart devices, (2) work to develop solutions that combine content and services, (3) develop and provide service products that enhance safety and security, and (4) concentrate on opening SLP stores by renovating existing stores and establishing new ones.

Due to a series of shifts in the business model, the ratio of ordinary income to sales is expected to improve to 9.9% in the term ending March 2018. ROE will remain at a level of over 15%.

As the burden of selling goods in sales operations decreases, earnings from increased sales of services will become even more evident. In addition, the average sale per customer is increasing steadily. As a result of the progress of these two factors, the Company will establish a unique position as a provider of personal communication services both in name and in reality.

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

## 5. Evaluation: Great progress through aggressive expansion into the city center

### **Improvement in ROE due to the conversion of earnings structure: Continuous steady growth is expected**

The Company 1) sold traditional goods (products), but 2) changed to selling services that make the usage of goods convenient, and 3) is selling services that are integrated with goods (solution services) now. When the monthly fee sales increase, services will account for an increasing proportion of cost price. However, this trend will make long-term provision of services possible and further solidify a base of loyal customers.

If existing stores are able to increase sales as a whole by accommodating demand for services, the Company will manage to maintain double-digit growth by opening four to five stores a year steadily. The Company is working to make its customers members of its service system, and is focusing attention on how to heighten this stock effect. Customers of the service system exhibit several usage patterns: some users own several pieces of hardware, while others subscribe to the service system so that their family members can use it. By making these users members of its service system, the Company will be able to increase the unit price of service per customer. There is ample room for the Company to come up with new ideas to attain this goal in the future. Examples include providing multiple services consisting of online magazines and music content as well as pursuing ease of use for security by offering a new combination of services.

It was in 2005 that the Company took the decision to shift its revenue source from selling PCs to providing services. Eight years after that, profits have caught up with the business model shift. Will the Company's business model remain as a niche presence or evolve into a new major move? President Nojima's next strategy will attract the market's attention, but if the deployment into the city center is successful, great progress can be expected.

The Company's business model is to secure stable income from sales of services through sales of Internet devices and other hardware. President Nojima believes that PC DEPOT stores can coexist alongside major electronics retailers in different market segments, keeping a certain distance. In the future, there will also be room for the Company to increase its membership to 1 million or more as well as raise the monthly fee unit price from a few thousand to 5,000 yen or more by combining and diversifying service menus. If this happens, achievement of the goal of 10 billion yen in ordinary income (an ordinary income ratio of 10% to 15%) will be in sight. Market watchers can place great expectations on the Company as it is highly likely to enter this new phase of development.

The Company's efforts to shift to a stock-type profit structure based on service sales have evidently borne fruit. This shift in business model can be favorably evaluated, and the effects of new aggressive

---

This report has been written based on an independent viewpoint, and therefore in principle it is not based on the Company's position on the matter herein. The objective of this report is to facilitate a deeper understanding of the Company on the part of investors, and as such does not recommend that investor investment in the Company, does not solicit such investment, and does not advise that such investment be made. The analyst who authored this report is wholly responsible for the content herein, and has no conflict of interest regarding the investment decisions of investors regarding the Company. This report is a presentation of the Analyst's opinion of the Company, and all unauthorized usage hereof is prohibited.

sales plans such as the development of many SLP stores can also be expected. Therefore, the Company is rated A. (Please refer to the front page for an explanation of corporate ratings.)

In January 2015, the Company conducted a 1.5 for 1 stock split. The Company was promoted to the first section of TSE in November 2015. Due to the effect of equity finance conducted in 2015, the number of shareholders increased to 2,759 as of the end of March 2016.

In June 2015, the shareholder special benefit plan was improved. The unit required to receive the special benefit was reduced from 400 to 100 shares. The plan distributes a 1,000 yen gift certificate (or 2,000 yen PC Clinic store voucher) for 100 shares, a 2,000 yen gift certificate (or 4,000 yen PC Clinic store voucher) for 400 or more shares, or a 3,000 yen gift certificate (or 6,000 yen PC Clinic store voucher) for 1,000 shares or more. As shareholders can use gift certificates for online shopping, PC DEPOT stores need not be nearby. Increasing that number further will be effective in unifying customers and shareholders.

Based on a stock price of 1,553 yen as of June 9, 2016, PC DEPOT has a PBR of 3.08, an ROE of 15.6%, and a PER of 19.8, with a dividend yield of 0.8%. Meanwhile, its strategy of making profits through providing IT solution services and positioning its stores in a market segment to coexist alongside mass home electronics retailers has started to contribute to earnings. Against this background, more and more market players will give the Company's corporate value high ratings as its earnings grow.
